

Introducing VIPS

Visibility Into Performance System

Global Process Management is a provider of Engineering and Operations Management services with over 10 years of proven results in locations around the world. One of the keys to our success is our attention to detail in managing hundreds of tasks across different locations and functional areas every day. When we wanted a system to help us to do this, we could not find anything on the market that was suitable; so instead we built our own.

VIPS allows it's users to manage all of their Operational, Engineering and Project tasks in one dynamic platform. Better still, the application works on your laptop, tablet or smartphone to give you the flexibility you need in any situation.

Want to complete a walk around check as part of daily management systems? No problem, a few clicks and the interactive check sheet is available on your mobile device to guide you through your work.

Want to service a piece of equipment on a production line? No problem, the work order will be in your queue with instructions, diagrams and a spare parts list.

Want to manage a machine upgrade or even a large scale project? No problem, the project module in VIPs allows you to plan and implement pre-work, installation, check out and start-up activities and then monitor progress through a range of tools and reports.

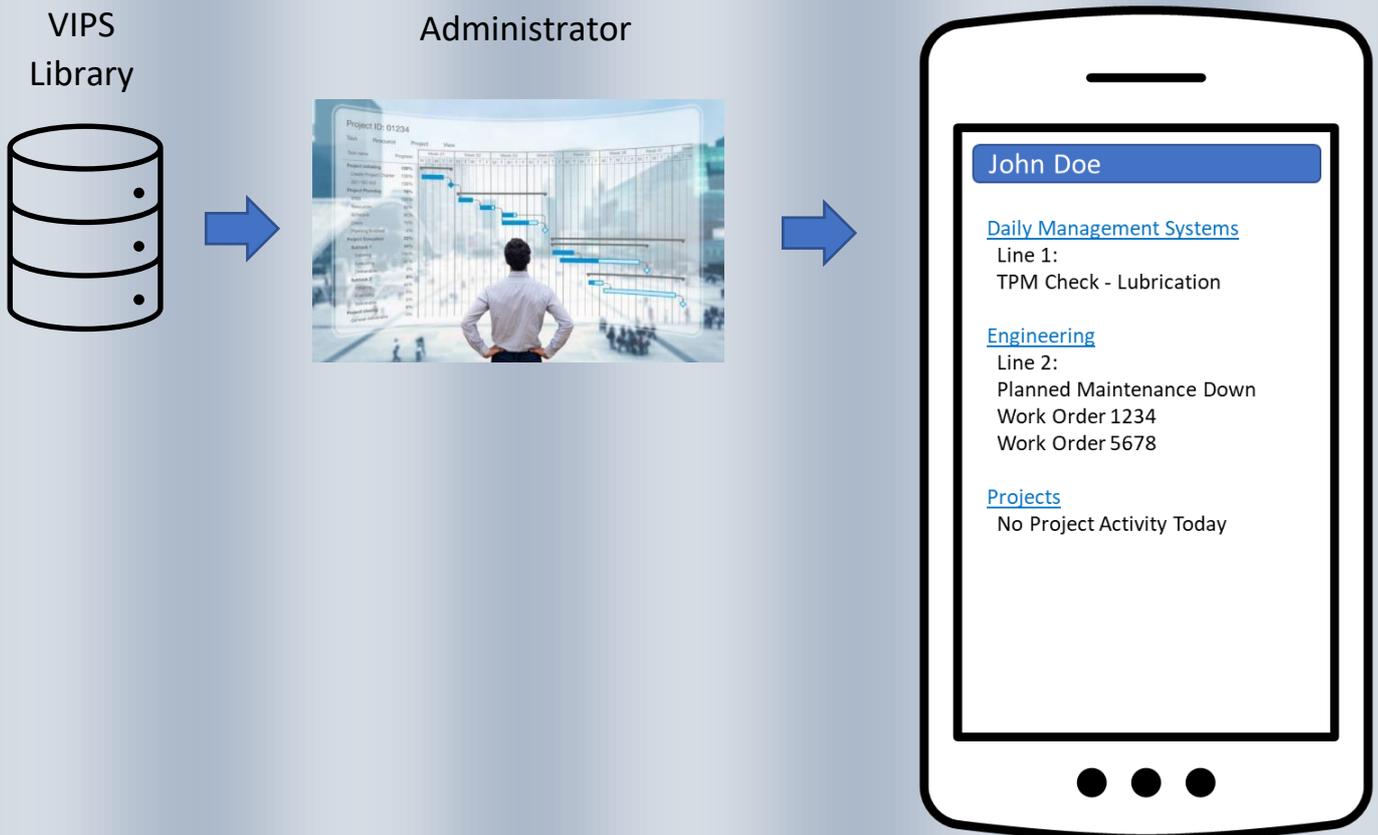

How it Works

Work Lists are stored in a library and include information such as:

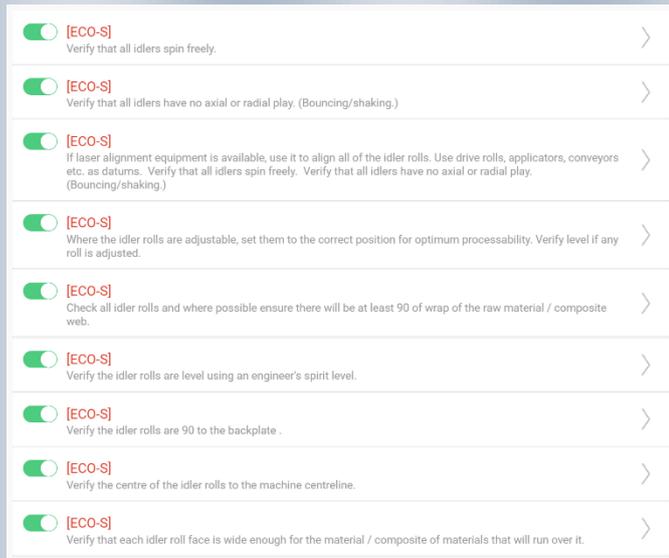

Category	Work Lists can be categorised as an Daily Management System Check , a Work Order for a Maintenance Task or a Project Device Check .
Resource	Which resource should complete the work? Leader, Engineer, Technician or Operator.
Frequency	How often should the work be completed?
Tasks	A step by step, detailed description of the work that needs to be completed. Including words, photos, diagrams, hyperlinks, etc.
Project Stage	Used in project applications to help with sequencing of work and avoidance of conflicts.

User accounts are set up, and these include the individual’s role and discipline. Work lists can then be assigned to any resource in the system as one off or recurring task.

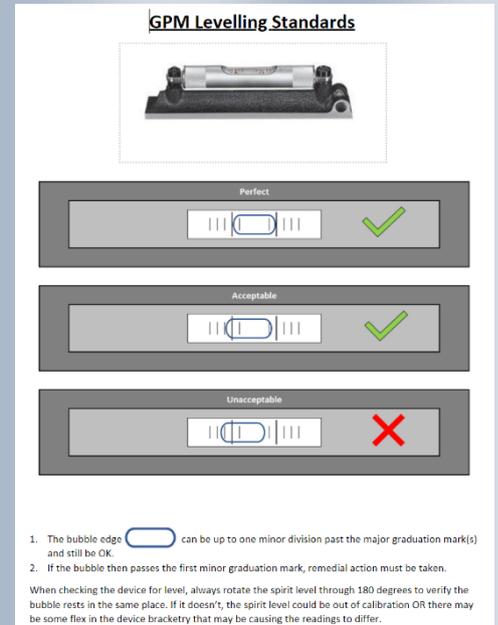

Launch the app and it will open your queue and allow you to see what work you have scheduled for today.

What's In a Worklist?

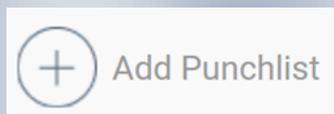

Each worklist contains a detailed list of tasks that specifies the work that needs to be completed.

Tasks can be opened to reveal additional information such as photographs, diagrams, hyperlinks etc.

Once the work is completed, the slider is moved over to confirm the task is done.

What If I Find a Problem?

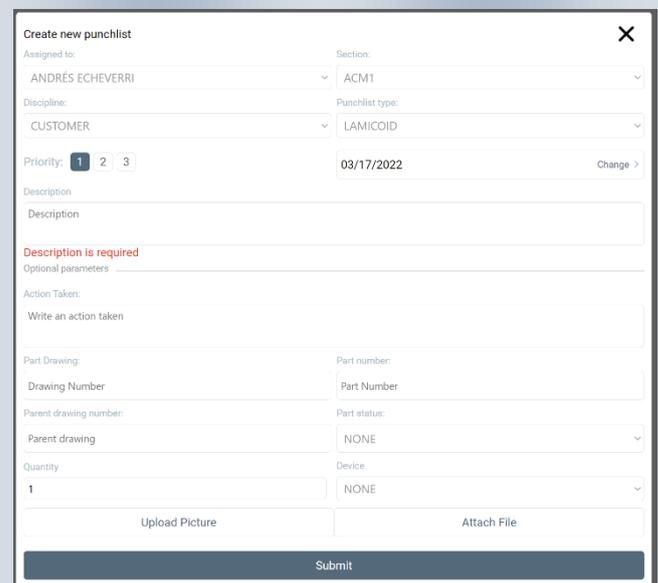

If a problem is found during the course of a task being completed, an Punch List item can be raised to make sure the team follows up. The punch list is available from most screens by clicking the 'Add Punchlist button.

A dialogue box opens that allows a user to specify the location of the problem and what resource is needed to fix it. A comment can be added and a user can even take a photograph to help others understand what needs to be done.

If a punch list is assigned to you by someone else, you will be notified by e-mail with a useful hyperlink that will take you into the system to view the item.

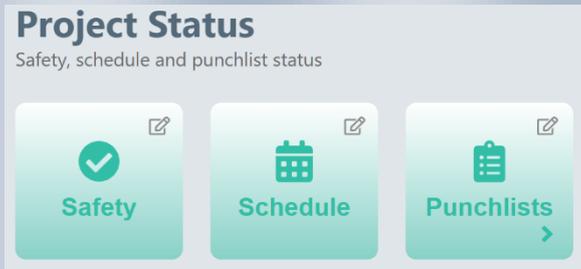

On completion, remedial actions can be recorded, and the punch list item can be closed.

How Do I Track Progress?

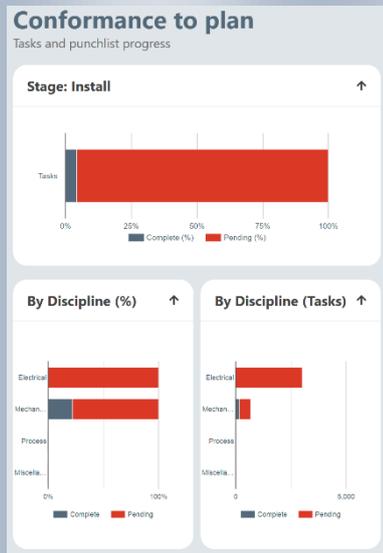

Dashboards are available for the team to understand how things are going with tasks in the Daily Management System, the Maintenance System and any Projects that are ongoing.

Each dashboard is tailor made to provide the team with the information they need to manage work effectively.

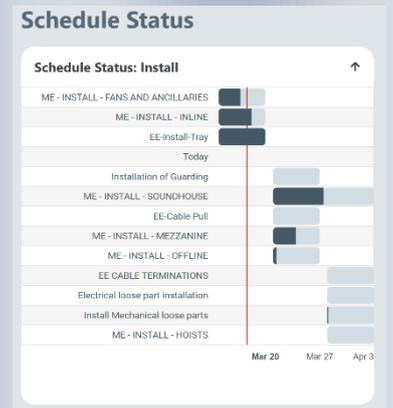

If it's top line information that you need, each dashboard leads with a traffic light panel to show the overall status.

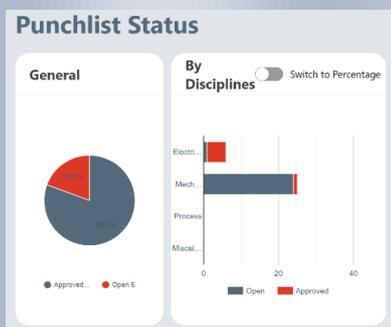

If you want to drill down further, information is available around conformance to plan.

Work can be tracked versus the schedule to see if specific activities are ahead or behind.

Punch list completion can be shown by discipline so it is clear how each team is doing.

Daily notes and a photo gallery help to keep the team updated.

Is VIPS Easy to Use?

In keeping with most apps, VIPS has been designed to be very intuitive and easy to use. As per a banking app, news app or weather app, any user can quickly learn how to navigate around VIPS and find the information they need. That said, GPM provide on-line training for their clients to make sure they are getting the most out of using the app.

How Do I Find Out More?

For further information please contact Rene Zelders or Rae Kirkwood who can arrange for a demonstration of the system, along with a discussion on your specific needs.
